

ENGINEERING ELECTRO-WELDED MESH

CHARACTERÍSTICS

Built with polish, galvanized or corrugated wire in grades 50 or 60. The design and manufacturing of this type of mesh offer great advantages for saving material and labor as well as ease of installation. The mesh presentation can vary in measurement, caliber and steel areas according to the client needs. The mesh can be built with or without endings on the edges per client request. Warranty of resistance to welding cuts ($25 \text{ kg/mm}^2 \times \text{transversal area of the wire with the biggest diameter}$).

APPLICATIONS AND USES

Normally used in corners and finishing of walls in house, warehouse and office construction as posts and concrete beams for cinder block, brick or stone foundation.
